The following is the Minnesota Business Snapshot Bulk Order Implementation Guide and Record Layout which describes the information available under this agreement.

## Introduction

The Office of the Minnesota Secretary of State (OSS) offers the ability to purchase Minnesota Business Snapshot data from the Minnesota Business & Lien System (MBLS). This Implementation Guide is intended for the business or administrative user as well as the technical user and is divided into four sections:

Section 4 - Bulk Order Sample Data with Record Layout provides examples of how the data will be formatted.

## Overview

A Data Request in the context of this document is a means for requesting a set of records based on responses provided from the Minnesota Business Snapshot survey. Note: Submission of this information is voluntary and is only asked for from an original filing and subsequent annual renewals and/or annual reinstatements.

The fulfillment of each request will include a complete set of the most recent responses provided by the business. If the business did not respond to a particular question in the most recent response, the answer will be *'No answer provided'*.

## Section 1 - Administrative Process

### Data Format

Data requests are a complete set of active responses. The data is provided as a comma separated value (CSV) file. The file is delivered as a compressed (zip) file. Note: Download the file and then use some type of database to import your data into a readable format or an application that allows you to open large files, which then can be manipulated, sorted and edited as needed.

The data content is provided in a comma delimited format with field values enclosed in double quotes. Note: Minnesota Business Names that have quotes as part of the name will be surrounded by 2 single quotes instead of 1 double quote.

The record format and unique key information for each file are provided later in this section.

Minnesota Business Snapshot Bulk Order data will consist of these two main record types:

1. Business Record Data (01)
2. Minnesota Business Snapshot Questions and Response Answers (02)

The Master ID is included in the two record types for each business and can be used as a foreign key to quickly identify related records within the file. The Master ID is static and applicable across all files. The Master ID is unique for each business and is not recycled for another business.
